

NEW!

PVC free screen surface for electrical Diplomat, Linea and Sesame 2.1

Euroscreen® **Xpert**

The Xpert screen surface is your solution when high requirements are set for **GREEN** installations - often a specified demand in schools and new-furnished buildings.

Euroscreen® now offers the new flame-retardant (B1) polyester surface in three models; the channel-fixed Diplomat Electric, standard roller version of Linea and the recessed ceiling screen Sesame 2.1.

The Xpert fabric features a two-side polymer coating with matt white woven front projection surface with a specially developed pattern structure to spread the projected light even over the surface. This pattern base also provides a superior diffusion in the projected image, making it compliant even higher than the 1080 compliance standard. The fabric is also supplied with a white black-out backing for superior blocking of incoming light from behind. With the upgraded formula we proudly have created the best surface flatness in a supported fabric used in a Euroscreen® product ever!

The fabric is PVC free and manufactured without the addition of substances that might be health hazard such as formaldehyde, CFC, solvents, lead/cadmium/quicksilver compounds.

Euroscreen® Xpert screen surface:

- PVC free
- Flame-retardant (B1)
- Suitable for **GREEN** installations
